JobConnect SA

Application Wireframes & User Story Flow Diagram

Project purpose: JobConnect SA is a proposed cloud-based platform that helps South African job seekers discover jobs, internships, learnerships and skills-development opportunities in one place.

1. Main dashboard wireframe

Low-fidelity screen layout showing the main areas a job seeker sees after signing in.

JOBConnect SA Home Search Saved Applications Profile

Welcome back, Job Seeker!

Find jobs, internships and learnerships that match your skills.

Search opportunities

Job title, skill or keyword... | Location: South Africa

Type: All opportunities | **SEARCH**

12 Available jobs	**5** Saved jobs	**3** Applications

Recommended opportunities

Junior Software Developer Example Company • Gauteng Skills: Java, JavaScript, SQL	View details →
IT Support Learnership Example Organisation • South Africa Requirements: Grade 12, computer skills	View details →

Note: Counts and listings are illustrative placeholders, not live data.

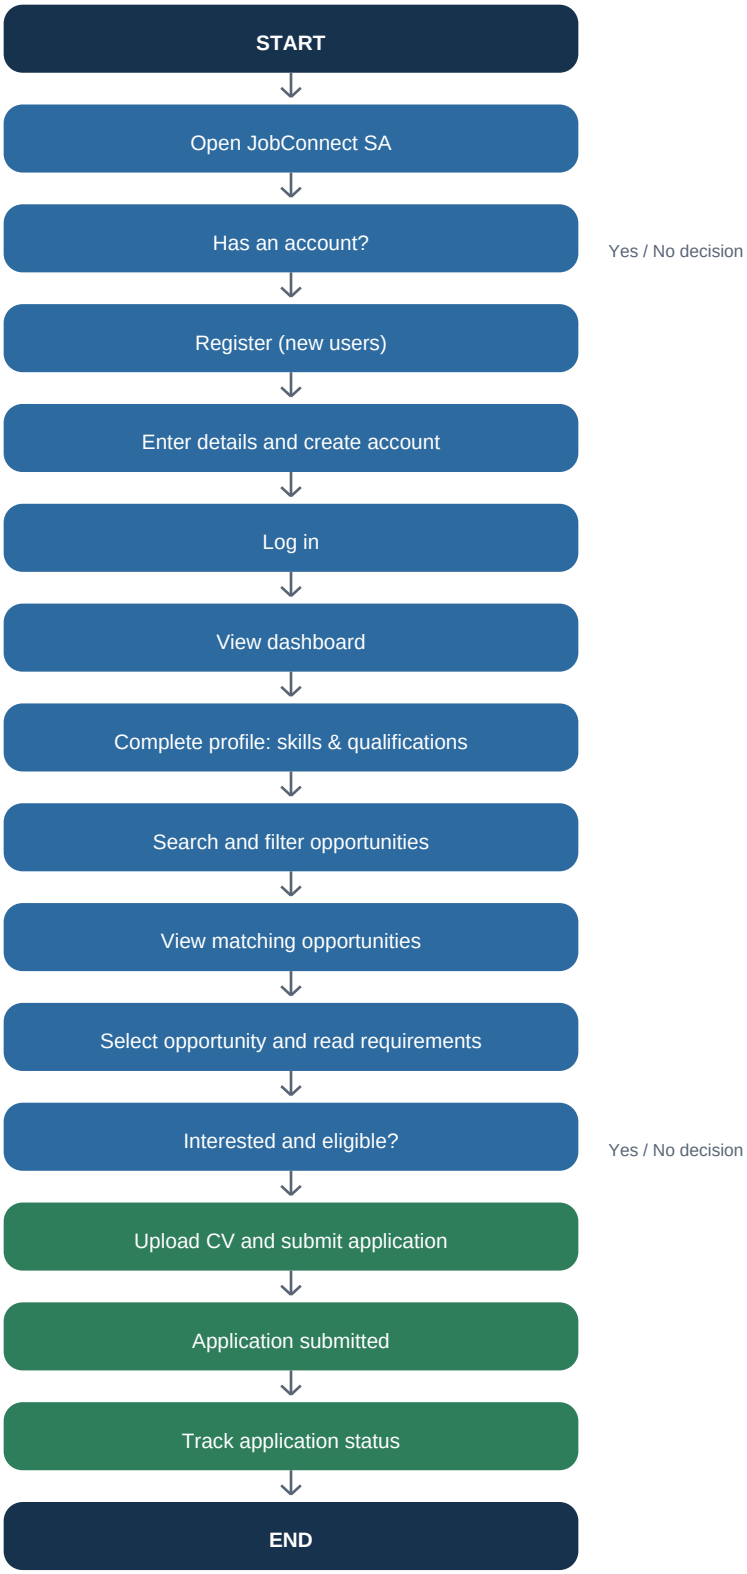
Application Upload CV: [Choose PDF file]	
APPLY NOW	**SAVE OPPORTUNITY**

4. User story flow diagram

The diagram represents the main journey from opening the platform to tracking an application. Users who are not interested or eligible return to the search step.



5. User stories and expected outcomes

User	User story	Expected outcome
Job seeker	As a job seeker, I want to register so I can access opportunities.	Account created
Job seeker	I want a profile containing my skills and qualifications.	Profile saved
Job seeker	I want to search and filter opportunities.	Relevant listings displayed
Job seeker	I want to save opportunities for later.	Saved list updated
Job seeker	I want to upload my CV and apply.	Application recorded
Job seeker	I want to track my applications.	Status displayed
Employer	I want to publish job opportunities.	Listings available
Administrator	I want to manage users and listings.	Platform content maintained

6. AWS service mapping

Application component	AWS service	Purpose
Website hosting	AWS Amplify	Host and deploy the web app
Login and registration	Amazon Cognito	Authenticate users
API endpoints	Amazon API Gateway	Receive frontend requests
Backend processing	AWS Lambda	Process searches and applications
Application data	Amazon DynamoDB	Store users, opportunities and applications
CV storage	Amazon S3	Store uploaded CV documents
Monitoring	Amazon CloudWatch	Collect logs and monitor errors
Permissions	AWS IAM	Control access to AWS resources

7. Recommended development sequence

1. Build registration and login screens.
2. Build the job seeker dashboard and profile.
3. Add opportunity search and filtering.
4. Add opportunity details and saved opportunities.
5. Implement CV upload and application submission.
6. Add application tracking.
7. Build employer and administrator screens.
8. Connect the application to AWS services.

Project status: These are proposed designs and workflows for planning and assignment purposes. They do not indicate that the screens, AWS services or features have already been implemented or deployed.
